

Entry inspection and exchange of experience

The latest meeting of the working group "Paper for Recycling" took place at Renkum (NL) on 21st -22nd April 2015. The group was commendably hosted by PARENCO and REPARCO offered the option to see their new PfR sorting plant. Christian Trieb presented INGEDE, its latest development and news from recent events like the CEN working group about European standardisation and ERPC meeting dealing with the deinking scorecard. The topic "End of Waste" was passionately discussed even if no solution was found. The results of a study of Darmstadt university about the opportunities and limits of the use of mixed papers were presented and the group draw the conclusions from this that there are too much obstacles which are contrary to a practical use. Unfortunately there was not enough feedback within the 1st quarter to the annual questionnaire 2014 which would

have allowed to do a first evaluation of the PfR database. The theme about topics to be discussed in the future has conquered wide space. Examples are PfR collection concepts, entry inspection and quality monitoring systems, sorting and sorting plant control, materials causing problems at paper mills and pulper rejects. On some issues participants took over the responsibility to follow up and to prepare the theme for the next meetings. As usual the group spend some time for the experience exchange about the development of PfR quality and observations at mills' entry inspection. As always this was again a fruitful discussion.

The next meeting is scheduled for 10th -11th November. Place has to be fixed, however East or South Germany are in the focus.

Manfred Geistbeck

INGEDE Project 147 15

CTP Disperstick

Grenoble, France

30 Jun -02 Jul 2015

Zellcheming Expo

Frankfurt a.M., Germany

Deinking Process: working group between dirt specks and stickies

Like the last meeting of the working group "Deinking Process" the meeting took place in connection with the working group "Paper for Recycling".

In the first part of the meeting we discussed about deinkability data base and about problems and observations in the deinking process of the mills. In

the second session we focused on stickies, in special microstickys and how to measure them.

After the meeting PARENCO organized a mill tour. A familiar face took us through the paper mill: Krystyna Frencken who former represented PARENCO at INGEDE. The paper mill has two graphic paper machines but one was shut down in 2009. It is under discussion to reactivate this machine for packaging papers. The other paper machine produces mainly SC-B paper.

We thank REPARCO and PARENCO very much for hosting our groups.

Also the next meeting of the working group will again be connected to the working group "Paper for Recycling" and is scheduled for the 11th-12th November.
